EDUCATION

BS in Data Science - FAST NUCES

A-Levels - The Science School

O-Levels - The Science School

Graduated 2026 | CGPA: 3.50/4.00

2022 | 3 A Grades

2020 | 8 A and A* Grades

EXPERIENCE

Data Scientist Intern - Teradata

Summer 2025

- Built a proof-of-concept system to analyze contracts for intellectual property law compliance using LLM prompt engineering.
- Engineered structured prompts to extract legal insights from unstructured technical documents.
- Demonstrated the feasibility of automated compliance verification using generative AI.

AI Engineer Intern - Ioptime

Summer 2024

- Implemented NLP architectures including Transformers, BERT, GPT, RNNs, and LSTMs.
- Built an interactive analytics dashboard (PyDash) for a medical AI project deployed in Zimbabwe.
- Enabled real-time visualization of model outputs and performance metrics.

PROJECTS

Gradlift - AI Career Advisor (Final Year Project)

aicareeradvisor.space

- Built a full-stack AI platform that parses resumes (PDF/DOCX) and semantically matches them to 34 career archetypes via FAISS + SentenceTransformers, with confidence-scored role fit.
- Added a Groq-powered RAG chat advisor with live web search, AI-driven skill-gap analysis, and ATS-optimized resume generation.
- Hardened the FastAPI backend for production (JWT auth, rate limiting, audit logging, Alembic migrations) and built a WebGL/shader 3D UI (React Three Fiber).

AI Agent Product Portfolio (9 shipped products)

subhan-portfolio-msk.vercel.app

- Designed, built, and deployed 9 live, full-stack AI agent products spanning recruiting, EdTech, sales, legal contract review, finance, research, voice, and video, each with trained classifiers, LLM inference, and live eval dashboards.
- Engineered a multi-account LLM token-pool with automatic failover to keep every product's core AI feature reliable in production.

Fraud Detection MLOps Pipeline (IEEE-CIS)

github.com/.../fraud-detection-mlops

- Built an end-to-end Kubeflow pipeline with cost-sensitive XGBoost/LightGBM models for fraud classification on the IEEE-CIS dataset.
- Set up CI/CD via GitHub Actions and Jenkins, Prometheus/Grafana monitoring with drift simulation and automated retraining, and SHAP-based explainability.

Two-Stage Incremental Elephant Flow Detection (Research)

github.com/.../Elephant-Flow-Detection

- Reproduced a published network-traffic-classification paper, then improved on it with a two-stage incremental ML framework and strict data-leakage prevention.
- Exported deployment-ready ONNX models for early elephant-flow detection.

SKILLS

Programming: Python, TypeScript, C++, SQL, HTML, CSS

AI / ML: LLMs (RAG, Prompt Engineering, Fine-Tuning), NLP (Transformers, BERT, GPT), Semantic Search (FAISS, SentenceTransformers), XGBoost, LightGBM, SHAP

MLOps: Kubeflow, MLflow, CI/CD (GitHub Actions, Jenkins), Docker, Prometheus, Grafana, Drift Detection

Full-Stack / Web: Next.js, React, FastAPI, Flask, React Three Fiber (WebGL)

Data Engineering: Spark, Kafka, Hadoop, PostgreSQL, NoSQL

Cloud / Visualization: AWS, Vercel, Power BI, Tableau, D3.js

ACHIEVEMENTS

- Winner - Softec 2025 Data Visualization Competition
- Winner - DataFest 2026 Data Visualization Competition
- Winner - APIMATIC AI Coding Assistant Hackathon 2025
